Test Host: http://3.9.45.117
Live Host: payments.psirs.gov.ng

Flow:

- Client initializes transaction
- Client gets a redirect url to direct to
- Client calls verify_payment to verify that payment is received on piras

Steps:

1. Initialize Transaction:
   POST   {host}/monnify/initialize_transaction
   Params:
   { "brn":"{billing_ref}",
    "callback_url":"{client_url_to_redirect_to_after_payment}"
   }

   Expected Result:
   {
     "redirect_to_url":
   "https://sandbox.sdk.monnify.com/checkout/MNFY|32|20220508162721|000876",
     "callback_url": "{host}/monnify/verify_payment/{Billing_ref}",
     "message": "Success! Please redirect to the provided url. Call the provided 'callback url'
   when done"
   }

2. Verify Payment: (This would normally be called automatically after taxpayer has made
   payment via the monnify web sdk. You can also call it manually however.
   GET {Host}/monnify/verify_payment/{Billing_ref}

   Expected Result:
   Payment not received yet. Please refresh this page to check again!

   Expected Result if Payment made:
   Redirects to call back url automatically.
